

ASLON® DEMARICATION TILES

Aslon® Demarcation Tiles are designed to provide a safe walkway on roofs with highly visible yellow markings. The yellow lines on the tiles ensure that solar panels, air conditioning units, and other technical installations on the roof are easily and safely accessible for maintenance. Thanks to the various marking options, it is possible to clearly define a safe zone.

The tiles are water-permeable and feature a studded structure on the underside, allowing (rain) water to drain away immediately and the surface to dry quickly. The tiles are slip-resistant, thereby minimizing the risk of slipping.

APPLICATIONS: ROOFS

They are used on flat roofs, with the exception of PVC roof coverings, and have a size of 120 x 60 cm.

PIN/HOLE CONNECTION

The tiles are supplied with a pin/hole connection, allowing the rubber tiles to be interconnected using four plastic pins.

WATER-PERMEABLE

The tiles have a studded structure on the underside and immediately drain (rain) water.

PREVENTS SLIPPING

The tiles are slip-resistant, thereby minimizing the risk of slipping.

SUSTAINABLE

The tiles are made from recycled rubber granulate and are fully recyclable after use.

SPECIFICATIONS

Colour	black with yellow markings
Sizes	1.200 x 600 mm
Thickness	30 mm
