

ASLON® TILES SUPPORTS

The Aslon® Tiles supports reduce the risk of damage to roof coverings and ensure drainage is possible beneath the flooring installed on the roof.

ROOF APPLICATIONS

The tiles supports provide a stable base for roof terraces, technical installations, and other rooftop applications. The advantages of the tile supports include eliminating unevenness and accommodating different height levels. In addition, they absorb sound and vibrations, contributing to a quiet and comfortable environment. They are suitable for use on flat roofs, with the exception of PVC roof coverings.

TILES SUPPORTS WITH ALUMINIUM FOIL

The 100 x 100 x 10 mm tiles supports are also available with an aluminium foil layer on the underside. The aluminium foil prevents migration caused by plasticizers, allowing the tile supports to be placed directly on PVC roof coverings.

FLOOR PROTECTION

The tiles supports provide a stable surface and offer a solid base for installation.

EASY TO INSTALL

The tiles supports are very user-friendly and are mainly used outdoors.

SUSTAINABLE

The tiles supports are made from recycled rubber granulate and are fully recyclable after use.
