

ASLON® MOUNTING BLOCK 95 MM

Aslon® mounting blocks are made from recycled rubber and provide effective sound and vibration damping. Thanks to their shock-absorbing properties, they protect technical installations and contribute to a quiet environment.

The mounting blocks are versatile and suitable for stable placement of air conditioners and technical installations.

INTEGRATED MOUNTING RAIL

Each mounting block is equipped with an integrated aluminum mounting rail in M8 or M10 and can optionally be supplied with a mounting kit. This ensures quick, safe, and efficient installation of various types of equipment.

Thanks to the recycled rubber, the blocks reduce vibrations and also protect the underlying surface.

INSTALLATION ON PVC ROOFS

For roofs with PVC roofing, special strips are available for the mounting blocks, featuring an aluminum foil layer on the underside. The foil prevents the migration of plasticizers, allowing the mounting blocks to be installed safely.

SOUND DAMPENING

The rubber mounting blocks provide sound and vibration damping, contributing to a quieter environment.

EASY INSTALLATION

With the mounting kits, installations can be easily mounted on the integrated aluminum mounting rail of the blocks.

PROTECTIVE

The use of the rubber mounting block minimizes the risk of damage to the roof surface.

SPECIFICATIONS

Color: black
Width: 180 mm
Height: 95 mm
Lengths: 400 mm | 600 mm | 1.000 mm

The blocks are available individually and as a set.
