

ASLON® GRASS TILES

The rubber grass tiles provide a safe and comfortable surface for walking and playing while maintaining a natural appearance. Due to the open structure, water drains directly into the ground. In addition, rubber grass tiles help to protect grass from excessive wear and damage.

The tile features a practical interlocking system, allowing the tiles to easily snap together. This creates a stable and sturdy surface. The tiles can be installed directly on stabilized sand, thereby avoiding high installation costs.

AVAILABLE WITH AN EPDM TOP LAYER

The tiles are constructed with a base layer of recycled SBR and a top layer of coated EPDM. As a result, these tiles are made entirely of recycled material. They comply with all requirements under the applicable PAH regulations and all REACH guidelines. In addition, the grass-permeable tiles are suitable for sports and play and have been tested for fall heights according to the Head Injury Criterion (HIC).

FALL-BREAKING

The EPDM tiles meet the most strict standards for fall protection in accordance with N1177:2018

NATURAL APPEARANCE

Thanks to its open structure, the grass remains visible and the ground retains its natural appearance.

SUSTAINABLE

The grass tiles are wear-resistant and suitable for long-term, heavy-duty use in outdoor areas.

SPECIFICATIONS

Colours	Black and green		
Dimensions	1.000 x 500 mm		
Thicknesses	45 mm and 65 mm		
Fall height (HIC)		installed	critical
	45 mm	1,25 meter	2,00 meter
	65 mm	1,57 meter	2,10 meter
